

Some notes before scaling...

- Make sure you are on **PHP 7** (out since Dec 2015)
- Swap Apache for **nginx** and **php-fpm**
- MySQL is usually one of the first things that hangs when scaling
- Blocking code is slow, check-out Async PHP like [amphp](#), [Reactor](#) and [Kraken](#)

PHP 7 is twice as fast. 7.1 is even faster.

/ Scaling Php

**SCALABILITY IS A FEATURE OF THE
ARCHITECTURE.**

NOT THE FRAMEWORK.
