AGENDA

- 🖐️ / What I do in Wizeline
- Before you need to think about scaling
- Scaling ⬆️ vs ⬇️
- Making 10ish Factor PHP Apps
- Ready to Scale
- CD / CI
- Q & A's

Some notes before scaling...

- Make sure you are on **PHP 7** (out since Dec 2015)
- Swap Apache for **nginx** and **php-fpm**
- MySQL is usually one of the first things that hangs when scaling
- Blocking code is slow, check-out Async PHP like [amphp](#), [Reactor](#) and [Kraken](#)

PHP 7 is twice as fast. 7.1 is even faster.
